
Emu Emax II

The Emax II sampler driver was written and tested for use with Emax II software version 1.0. If you have a different Emax II software version, SampleVision may not work correctly with your Emax II. Contact us if you do not understand this or have a problem communicating with the Emax II.

The Emax II sampler driver communicates in the same manner as the Emax driver. See the section on the Emax driver for details on interfacing with the Emax II.
